

Atividade 01 - Respostas:

Servidor:

```
package com.java;
import java.io.DataInputStream;
import java.io.DataOutputStream;
import java.io.IOException;
import java.net.ServerSocket;
import java.net.Socket;
public class Servidor {
    // Servidor - ServerSocket
    public static void main(String[] args) throws IOException{
            ServerSocket server = new ServerSocket(50000);
            System.out.println("Server started !!! \n");
            while (true) {
                Socket socket = server.accept();
                DataInputStream entrada = new DataInputStream(socket.getInputStream());
                DataOutputStream saida = new DataOutputStream(socket.getOutputStream());
                String cpf = entrada.readUTF();
                boolean valido = ValidaCPF.validaCpf(cpf);
                String resultado = valido ? "TRUE" : "FALSE";
                System.out.println("Resultado..... " + valido);
                if (valido) {
                   System.out.println("CPF Valido\n");
                }else {
                    System.out.println("CPF Invalido\n");
                saida.writeUTF(resultado);
                socket.close();
                if (!up) {
                    server.close();
                    System.out.println("\nServer closed !!!");
        } catch (IOException e) {
```

Cliente:

```
package com.java;
import java.io.BufferedReader;
import java.io.DataOutputStream;
import java.io.IOException;
import java.io.InputStreamReader;
import java.net.Socket;
public class Cliente {
   public static void main(String[] args) {
       System.out.println("Inicio...\n");
       System.out.println( 'Initio.'.', ');
System.out.println("Client started !!!");
System.out.println("Client started !!!");
           boolean up = true;
               System.out.println("-----");
               Socket socket = new Socket("127.0.0.1", 50000);
               DataInputStream entrada = new DataInputStream(socket.getInputStream());
               DataOutputStream saida = new DataOutputStream(socket.getOutputStream());
               BufferedReader br = new BufferedReader(new InputStreamReader(System.in));
               System.out.println("----");
               System.out.println("Digite o CPF: ");
               saida.writeUTF(br.readLine());
               if (entrada.readUTF().equals("TRUE")) {
    System.out.println("\nCPF Valido\n");
               }else {
                   System.out.println("\nCPF Invalido\n");
               System.out.println("-----");
               if (!up) {
                   socket.close();
                   System.out.println("\nClient closed !!!");
